

Mineralizes the water

Better Tomorrow

AWAKENS, CLEANSSES, ENERGIZES AND REVITALIZES AT THE CELLULAR LEVEL

Living water contains ionic minerals - incorporated naturally as water rushes over rocks and mineral formations. Minerals are considered the sparks of life since they are catalysts to nearly every metabolic reaction within the body. However, minerals must be in an ionic state - not suspended as in many colloidal products - in order to be absorbed and utilized at the cellular level. A balance of essential, ionic minerals adds "life" and a smooth taste to water.

Certain minerals (Calcium, Sodium, Zinc and others) contribute to the hexagonal structuring of water. Other minerals (chlorine, fluorine, aluminum etc.) are referred to as structure-breaking minerals they actually reduce the amount of hexagonally structuring in water.

The Vitalizer Plus contains a mineral cube, with a balance of ionic minerals from coral sand* and other sources, which are released slowly as the water swirls. Minerals include a predominance of structure-making ions: Calcium, Magnesium, Potassium, Phosphorous, Sodium and others. The resulting water is not only mineralized, but alkalized as well.

*A word about coral sand: Coral sand (otherwise known as coral calcium) contains over 70 different organically-complexed minerals and trace minerals. Coral, a once living organism, is one of the most balanced mineral supplements available. Not only are the minerals proportionately balanced, they have also been assimilated by a living organism and are therefore "organically complexed" so that the human body can recognize and utilize them in an available form.
