

Vitalizer Plus Better Tomorrow

AWAKENS, CLEANSSES, ENERGIZES AND REVITALIZES AT THE CELLULAR LEVEL

VITALIZER PLUS

Awakens, Cleanses, Energizes & Revitalizes at the cellular level - where it counts!

The Vitalizer Plus incorporates basic principles utilized in Nature, to create a special life-enhancing water your body will love!

How does Nature create crystal clear living water?

It begins with the rain or snow which is naturally energized and often highly structured water. It uses movement - vortexes of energy and natural curves. It adds oxygen and minerals as water splashes and falls and it uses vital magnetic fields from the earth, and far infrared (FIR) energy from the sun. The end result? A highly energized, structured, mineralized, oxygenated and purified living water!

Now, you can create the same living water in your own home with the Vitalizer Plus!

Vitalizer Plus is scientifically documented to:

1. Structure water - powerful magnetic and infrared forces reduce the size of individual water clusters, creating Hexagonal Water for more rapid penetration into the cells of your body.
2. Increase Oxygen - turbulent forces create a visible vortex, increasing the amount of oxygen in your drinking water - up to 30%.
3. Add minerals - a mineral cube within the unit, releases structure-making minerals during the vitalizing process to help structure the water and increase alkalinity.
4. Add energy - the resulting energy in Vitalized water is enough to begin to balance the organs of your body - within minutes after drinking.

Vitalized Plus water is Hexagonal Water! Why does a snowflake always have six sides?

Water is a network of hydrogen-bonded molecules. It can form numerous structures, depending on how the individual molecules bond together. The most recent scientific findings indicate that biological

organisms prefer the six-sided (hexagonal) ring-structure, found naturally in snow water. This Hexagonal Water forms a liquid crystalline lattice that is involved in cellular communication, intracellular water movement, enzyme function and many other metabolic processes. The amount of Hexagonal Water in the body has been correlated with aging. It has also been found to form the initial layer of water surrounding healthy cells. On the other hand, unorganized water has been described surrounding diseased and abnormal cells.

Hexagonal Water is composed of six individual molecules of water, held together by common hydrogen bonds. This unique water structure is capable of rapid penetration within the cells of the body. Most tap water and bottled water is composed of large water conglomerates which are too large to move freely into the cells. It must be re-structured within the body to penetrate the cells (a time-consuming and energy-consuming process).

Hexagonal water has 6 apparent functions:

- * Hydrates the cells
- * Helps transport nutrients to cells
- * Enhances waste removal from cells
- * Supports the immune system
- * Improves cellular communication
- * Enhances metabolic efficiency
